Most helpful customer reviews Now I'm proud to say that I have this Tevion FS 5000 Scanner that has been working on my Windows 7 computer for years. I've had various scanners, but this is the best scanner

for its price. I bought this for my Mom as she's elderly and moved in with us. I was really looking for a scanner that was really compact, and this is the one for me. It's small, I take it on the go all the time, and it's light. It's also the first scanner that my Mom has ever used, and her feedback is wonderful. Finally, the scanning results are great as it's far more intuitive than any other scanner I've ever used. You can get most pictures scanned in under one minute. I recommend this scanner to everyone. It is the best scanner for this price, especially for someone who is elderly and lives in a small place. The only reason that I can't give it a perfect rating is that it would be great if they'd make it even thinner - it's already light enough, but not super light. This is such a great scanner that it would be a waste to have to pay more for the

same great results. So I've listed some of the options below. I'm going to list my two favorite models below, but you can pick them out of any list. - Scanning from a Memory Card You can use this scanner from a memory card. I bought it from Amazon, and you can too, but it's the same price everywhere. I was also able to find the exact same scanner for much cheaper from another seller. Here's the link:
