It is similar to other cross-platform audio software such as Apple's Logic Pro and ProTools, Nuendo and Audio Engines and the Propellerhead Reason audio sequencer. While Sonic Foundry's Sonic Foundry Pro Series was a cross-platform software that allowed the use of Sound Forge Audio Studio inside and outside of Sony's audio consoles, Sony released a stand-alone version in February 2011. Sound Forge's technology is based on soXde, a completely open-source technology licensed from CodeWeavers. The technology allows a direct connection between the audio file and the audio software with no host software needed, so it works on all platforms. Sound Forge was originally developed by Sound Forge International, a company incorporated in the state of Washington in June 1994 by Steve Ferreira, Ben Schweitzer, David Annand and Donald Shoup. In 1997, Steve Ferreira, James Wood, and Donald Shoup established the sound foundry Inc. which was a wholly owned subsidiary of Sound Forge International.
