## Quick-Burn (LifeTime) Activation Code

Burning ISO file and MP3/WAV files to CD and DVD disc in a matter of seconds. 35 Comments show all comments Eric Wood • Oct 15, 2011 Thanks to the reviews, I downloaded the file and burned all the ISO files I downloaded via this program without a hitch. So I don't need another tool at all. Martin Strasser • Oct 16, 2011 So what's the problem with that? This is the only program I can think of that is so restrictive that it's not worth mentioning that it doesn't support Win7. And it is all-inclusive, because it has a script to burn a disc. And with the right switches you can burn a whole playlist of files into an iso. For example: `-script (dvd,1) [path\to\files\to\burn\to\dvd.dvd]` `-script (cd,2) [path\to\files\to\burn\to\cd.cd]` To reduce the amount of files to be burned, just use a wildcard to burn everything in the path\to\files\to\burn directory. You can use it to write a disc, a folder, a playlist, whatever. I just used this to burn an ISO, and it worked without a problem. Mike Kane • Oct 17, 2011 Nice, I do not own any video editing software, this might help with my current project. joel • Oct 17, 2011 Is this a replacement for Image DVD? Daniel Danford • Oct 17, 2011 One of the biggest problems with Quick-Burn is that it doesn't really tell you what it is you're doing. So if you happen to press the wrong button when your trying to burn a CD, well that's how it burns – you can't go back and fix it after the fact. I have tried it a few times, and at best it only burned one CD. If it worked as it should, it would be great, but it doesn't.
